

Maintenance paints for painted metal parts

29.7.2015

The surface treatment used for the metal parts is Polyester powder paint.
Car paints can be used as an alternative surface treatment.

Treatment:

- Sand down the area to be painted with G240-320 sandpaper or sanding mat.
- Clean the surface of any dust and oil.
- Protect the parts that will not be painted.
- Use a brush to paint smaller areas. For larger areas, you may use a paint spray, in which case remember to dilute the paint with water.
- Allow to dry, the drying time is shown on the container.

The colour ref. of the product being maintained*	Ref**	Colour	Description	Shade
xxxxxx-218	908034	Pink	Surface treatment for metal	RAL 4003
